Hiring Manager / Talent Acquisition Team
Target Company Name
Cairo, Egypt

Dear Hiring Manager,

I am writing to express my keen interest in the Cloud & DevOps Engineering opportunities at your organization. With a background in backend software development using Node.js, Express.js, and MongoDB, alongside growing expertise in cloud infrastructure, containerization, and security, I am eager to apply my technical skills and problem-solving abilities to contribute effectively to your team.

Previously, as a Backend Developer Intern at Bee Interactive, I played a key role in building and maintaining server-side applications, implementing RESTful APIs, and managing NoSQL databases with MongoDB and Mongoose. Additionally, my practical project work has strengthened my ability to design secure authentication mechanisms (using JWT and bcrypt), optimize performance, and integrate robust backend services.

While developing a secure tourism and booking platform (Horus) for multi-user roles, our team encountered critical authentication and session-handling vulnerabilities prior to deployment, I was tasked with identifying session flaws, securing user/tour guide access points, and hardening backend endpoints under tight project deadlines, I conducted an API vulnerability assessment, traced insecure data pathways, and implemented token-based JWT authentication paired with bcrypt password hashing and strict access validation, We successfully eliminated authentication vulnerabilities, secured real-time chat and payment-linking features, achieved an A+ grade, and ensured total data protection for user profiles.

Beyond core backend development, I am deeply passionate about cloud infrastructure, automation, and continuous integration. Currently, through my training at the National Telecommunication Institute (NTI), I am actively expanding my expertise in Linux administration, Docker containerization, AWS cloud architecture, Terraform (IaC), and GitHub Actions CI/CD pipelines. My work reflects a steadfast commitment to building reliable, security-conscious, and scalable deployment environments.

I am eager to bring my technical skills, problem-solving mindset, and proactive approach to your organization. I would welcome the opportunity to discuss how my background in backend development and cloud/DevOps practices aligns with your team's goals.

Thank you for your time and consideration. I look forward to your response.

Sincerely,

Youssef Essam
